

Finishing accessories by Tech-ni-Fold

Tri-creaser Easy-fit
Instant crease style change

Spine and Hinge Creaser
Close proximity creasing solution for Perfect Bound books

Micro-perforator
Produce fine, die quality micro-perfs with this powerful accessory

Multi-tool
Keeping work away from the Guillotine and Cylinder

CP Applicator
The ultimate close proximity and perforating applicator

More exciting devices are also being developed for the Speedcreaser

Specifications

Infeed width	18.9"
Paper weight	20 lb bond - 150+ lb cover
Minimum format	3.15" x 4"
Maximum format	18.9" x 19.6"
Machine weight	90 lbs
Dimensions	43" x 24" x 12" (L x W x H)
Voltage	115 v, 60 hz
Fuse protection	6 amp

...THE FUTURE IN VERSATILE FINISHING

The first and only bench top rotary creasing machine to give a letterpress quality crease

- **Quality Crease** – Patented creaser design works on both litho and digital print.
- **Gentle** – Unique rubber creasing rib is very gentle on difficult stocks and can crease up to 3 times deeper than metal made systems.
- **Quick** – Speedcreaser gives a matrix style crease with the speed of rotary production.
- **Versatile** – Many finishing devices available including flat micro perf tool.
- **Efficient** – Produce 1 or 8 creases all at the same speed

On the outside, this brand new machine has been designed as an easy to use compact and high speed creasing and finishing unit to enhance any modern 'on demand' print room environment. On the inside however, is an existing, 'tried and tested' system, developed by Tech-ni-fold in the form of the Tri-creaser, which until now has only been used on high production machines. In these environments the crease must withstand continuous operation over millions of cycles. The solid construction allows it to handle paper stock up to 150+ lb cover stock.

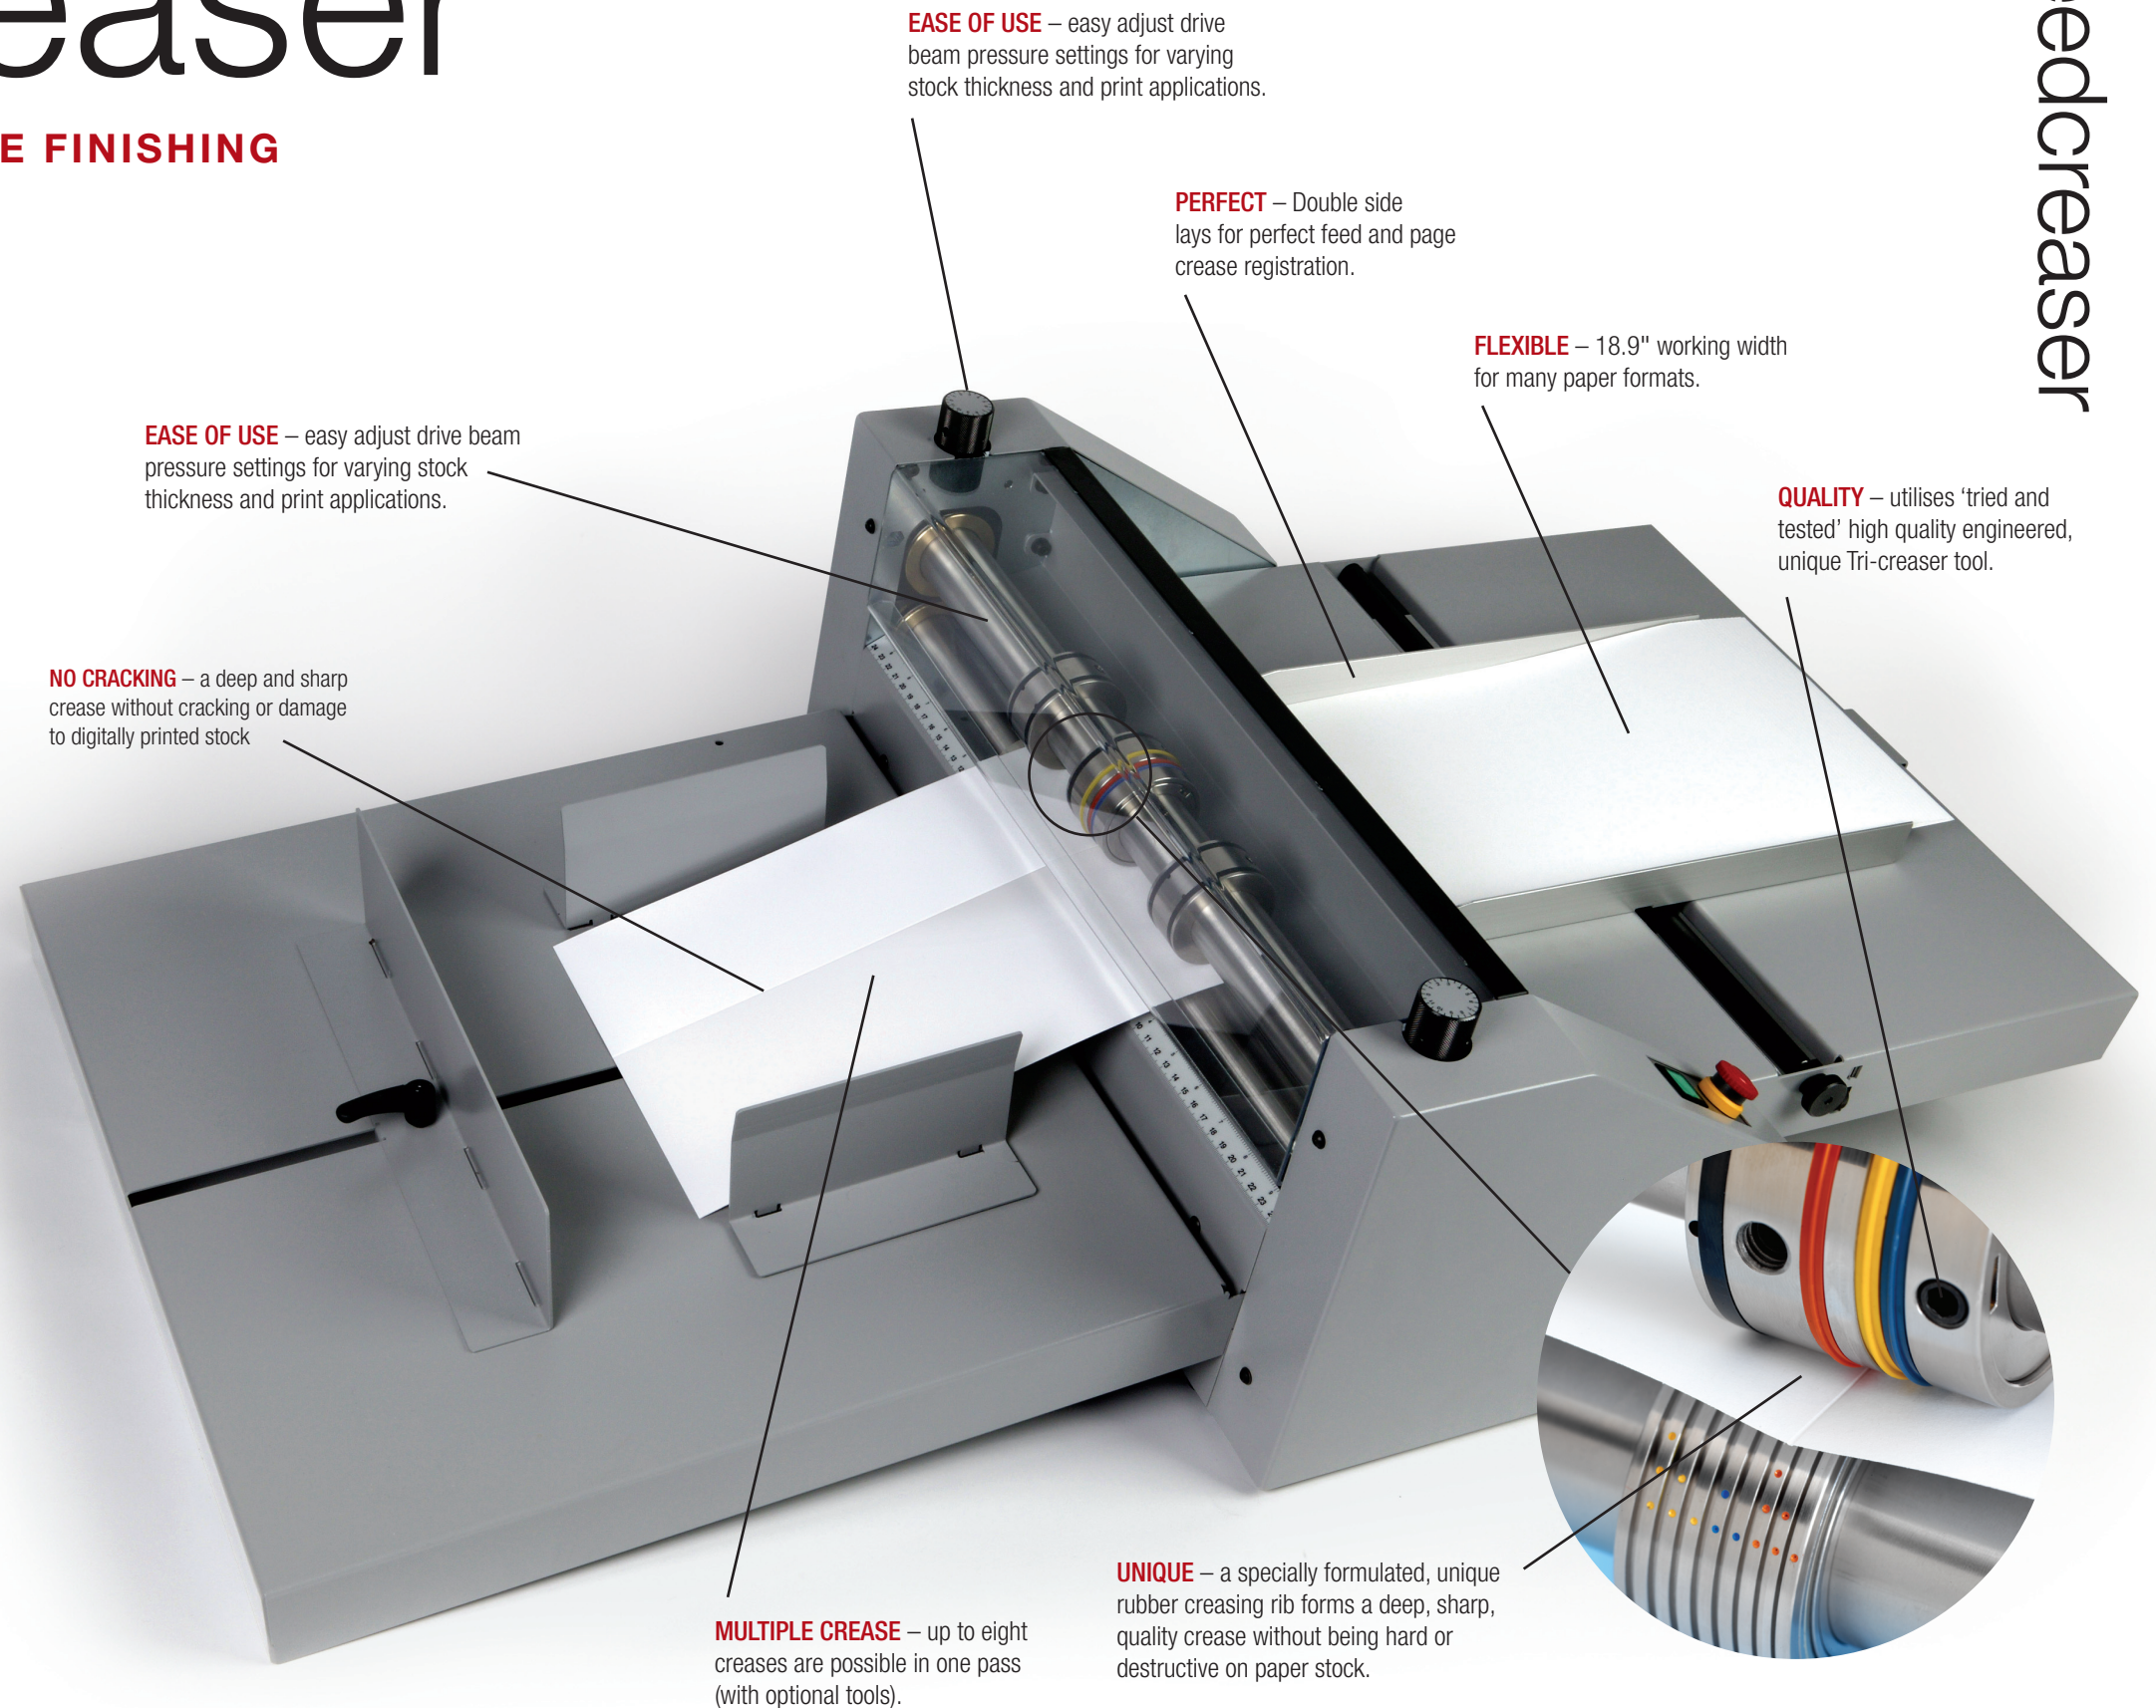

So it is no surprise to conclude that what you actually get with the Speedcreaser is a slight overkill on its design but a machine with the ability to produce work of the highest standards for a fraction of the cost for a long, long time.

Without Speedcreaser

With Speedcreaser

END YOUR
CRACKING
PROBLEMS!

EASE OF USE – easy adjust drive beam pressure settings for varying stock thickness and print applications.

PERFECT – Double side lays for perfect feed and page crease registration.

FLEXIBLE – 18.9" working width for many paper formats.

QUALITY – utilises 'tried and tested' high quality engineered, unique Tri-creaser tool.

EASE OF USE – easy adjust drive beam pressure settings for varying stock thickness and print applications.

NO CRACKING – a deep and sharp crease without cracking or damage to digitally printed stock

UNIQUE – a specially formulated, unique rubber creasing rib forms a deep, sharp, quality crease without being hard or destructive on paper stock.

MULTIPLE CREASE – up to eight creases are possible in one pass (with optional tools).
